

Identity for AI

Forward Looking Statements

This presentation contains “forward-looking statements” within the meaning of the “safe harbor” provisions of the Private Securities Litigation Reform Act of 1995, which may include, but are not limited to, statements regarding our financial outlook, product development, and market positioning. These forward-looking statements are based on current expectations, estimates, forecasts and projections. Words such as “anticipate,” “estimate,” “expect,” “project,” “plan,” “intend,” “believe,” “may,” “will,” “should,” “can have,” “likely” or the negative of these terms and similar expressions are intended to identify these forward-looking statements. Forward-looking statements are subject to a number of risks and uncertainties, many of which involve factors or circumstances that are beyond Ping Identity’s control.

These risks and uncertainties include, but are not limited to, risks associated with developing and delivering new functionality for Ping Identity’s product portfolio, new products and services, our business model, our past financial performance, possible fluctuations in our operating results and rate of growth, interruptions or delays in our service availability, breach of our security measures, the outcome of intellectual property and other litigation, risks associated with possible mergers and acquisitions, the immature market in which we operate, our relatively limited operating history, our ability to expand, retain and motivate our employees and manage our growth, new releases of our products and features, our integrations with cloud, mobile and web applications, and our ability to add and retain new customers.

Any unreleased products, features, functionality or roadmaps referenced across the website or in press releases or public statements are not currently available and may not be delivered on time or at all, as may be determined in our sole discretion. Any such referenced products, features, functionality or roadmaps do not represent promises to deliver, commitments or obligations of Ping Identity, Inc. Customers who purchase our products should make their purchase decisions based upon features that are currently generally available. Ping Identity, Inc. assumes no obligation and does not intend to update these forward-looking statements.

There is no assurance that any forward-looking statements will materialize. You are cautioned not to place undue reliance on forward-looking statements, which reflect expectations only as of this date. Neither Ping Identity nor Thoma Bravo, L.P. undertakes any obligation to publicly update or review any forward-looking statement, whether as a result of new information, future developments or otherwise.

OUR PROMISE

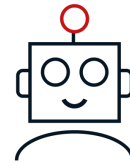

Trust every
digital moment

The trust landscape is evolving

Decentralization
of access

Non-human
identities

Constant,
evolving threats

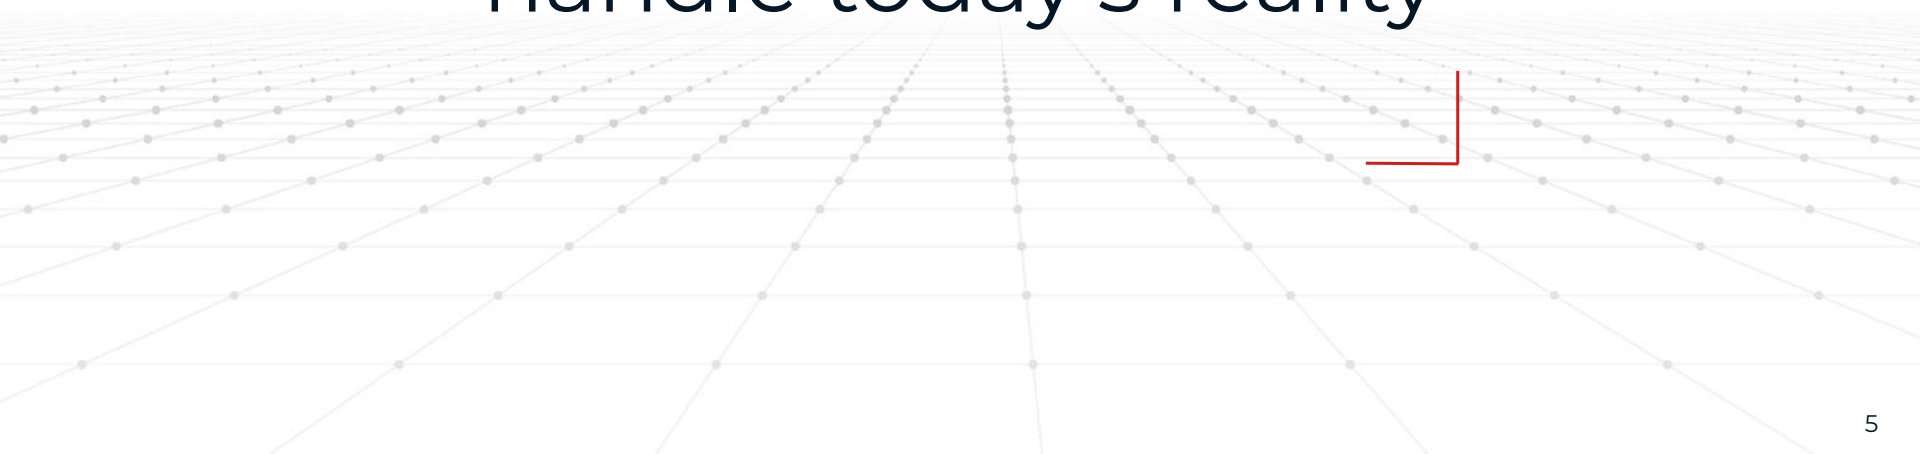

Customer
experience

IDENTITY

must evolve to
handle today's reality

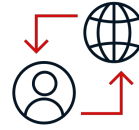

Expanding identity types

Customer

Workforce

Partner

AI Agents

TODAY

Humans are primary

Threats presumed outside

Friction in the name of security

TOMORROW

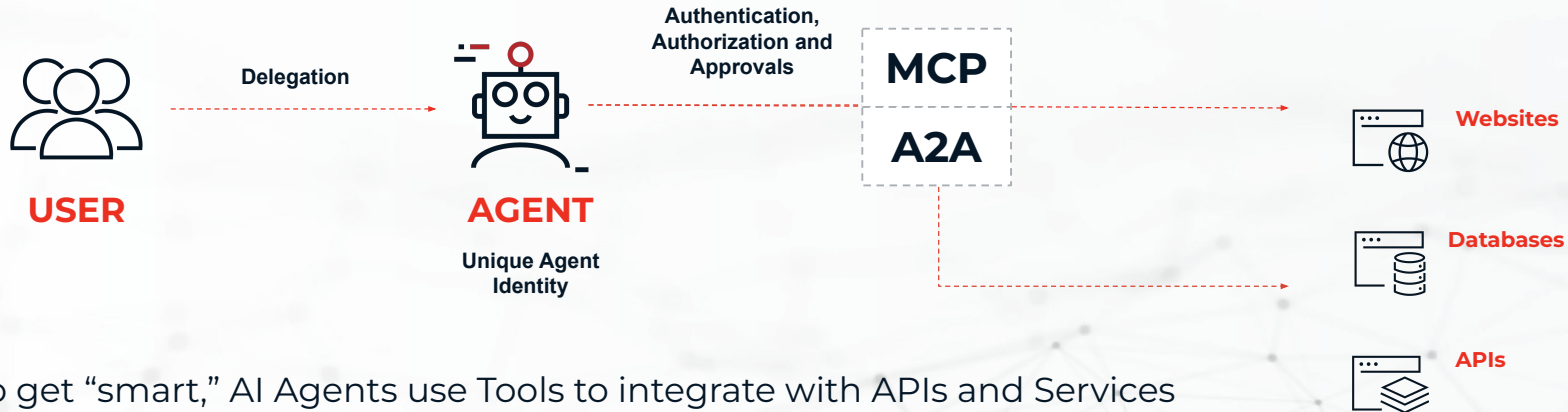

Agents outnumber humans 80:1

Threats presumed inside

Users demand frictionless

Identity is Central to Agent Connectivity

AI Agents need access to data and services

To get “smart,” AI Agents use Tools to integrate with APIs and Services

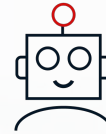

This interactivity means that **IAM is central to AI Agent success**

Identity for AI focus

Engage the agentic channel

Recognize agents, relate them to humans, and deploy agents to serve customers

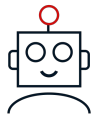

Secure the autonomous workforce

Discover, lifecycle manage, secure, and govern

Agent Use Cases

CIAM

Agent Identity for Customer Experience

Consumer Agents

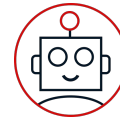

Enterprises addressing external agents (personal agents) engaging with their brand on behalf of customers that act as a new channel that needs to be enabled and secured.

Customer Service Agents

Enterprises enabling and securing agents they are building (digital assistants) to service their customers that access sensitive customer data.

WF

Agent Identity for Employee Productivity

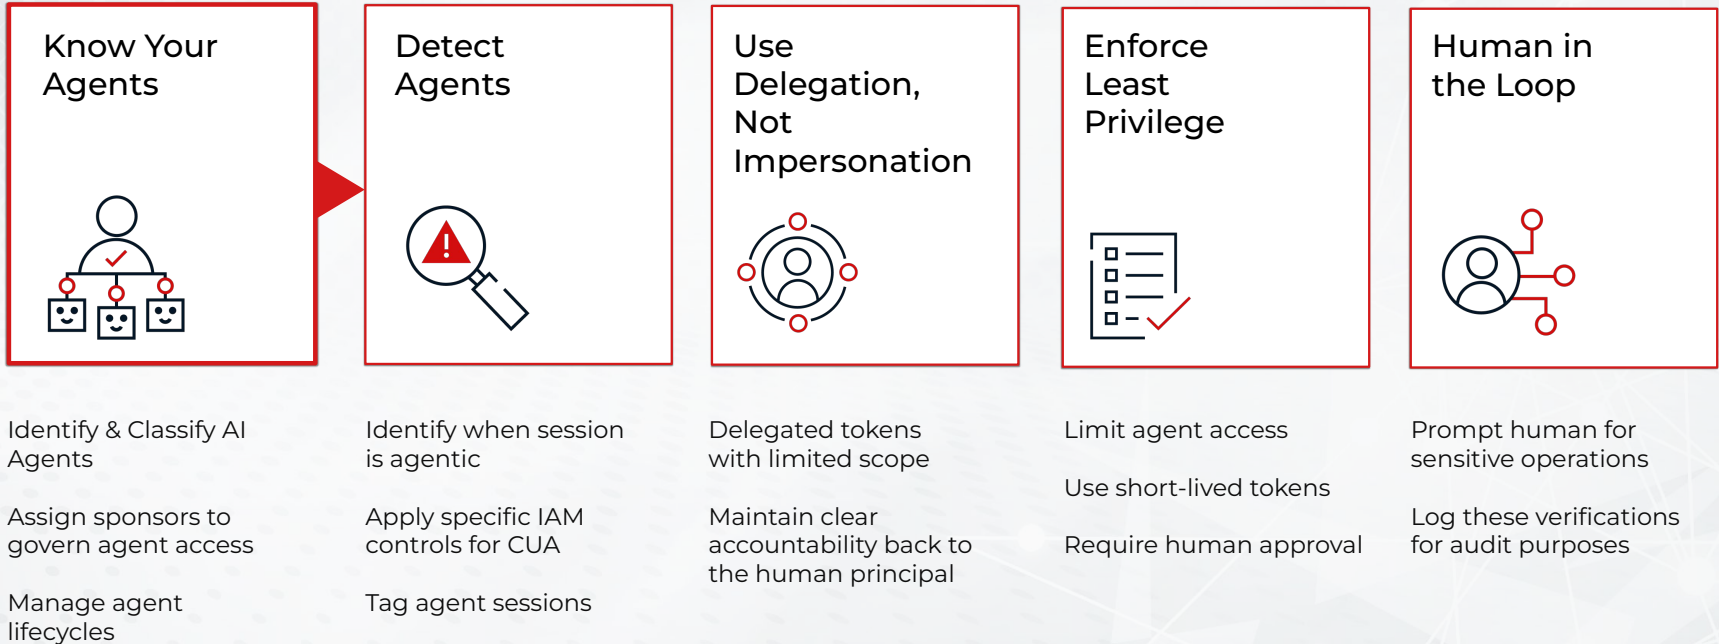

Employee Assistant Agents

Enterprises enabling and securing agents they are building (digital assistants) to assist their employees that access company resources and data.

3rd Party Agents

Enterprises managing and securing 3rd party agents (personal agents, digital assistants & digital workers) employees are using that access company resources and data.

Best Practices for Agent Identity

Delegation - what does it mean?

```
{  
  "aud": "https://mcp-server.example.com",  
  "iss": "https://issuer.example.com",  
  "exp": 1443904100,  
  "nbf": 1443904000,  
  "sub": "john@example.com",  
  "act":  
    {  
      "sub": "https://digital-assistant.example.com"  
    }  
}
```

Delegation means that we communicate two identities inside the access token

- ✓ Digital Assistants can access Banking Services
- ✓ John has given the Digital Assistant consent to act on-his-behalf
- ✓ Digital Assistants can be trusted with read-only actions, but we must step-up & verify when performing sensitive actions

This means we can make decisions about what the Agent can do, and when to re-involve the human

A red L-shaped graphic consisting of a vertical line and a horizontal line meeting at a right angle.

INTRODUCING

Identity for AI

A red L-shaped graphic consisting of a vertical line and a horizontal line meeting at a right angle.

A Unified Solution for Agentic Trust

Visibility

Discover agents deployed across, and interacting with, your digital estate.

Onboarding & Management

Centralized control for humans, agents, and resources they interact with.

Authentication

Issue the right tokens to the right actors with the right scopes at the right control points.

Authorization

Secure interactions, least privilege access, and delegation.

Human Oversight

Controls that give humans oversight and accountability of agentic activity.

Threat Protection

Mechanisms to detect and mitigate emerging agentic threats.

CIAM

Agent Identity for Customer Experience

WF

Agent Identity for Employee Productivity

Customer Challenges

Authentication & Authorization

Authenticate agents and ensure a delegated access model.

Define least privilege access controls for agents vs users.

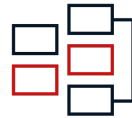

Agent/Resource Management

Register and manage agents as a new identity type.

Map agent access to tools and resources.

MCP & Resource Security at Scale

Standardize security for MCP developers.

Secure agent authorization to tools and resources.

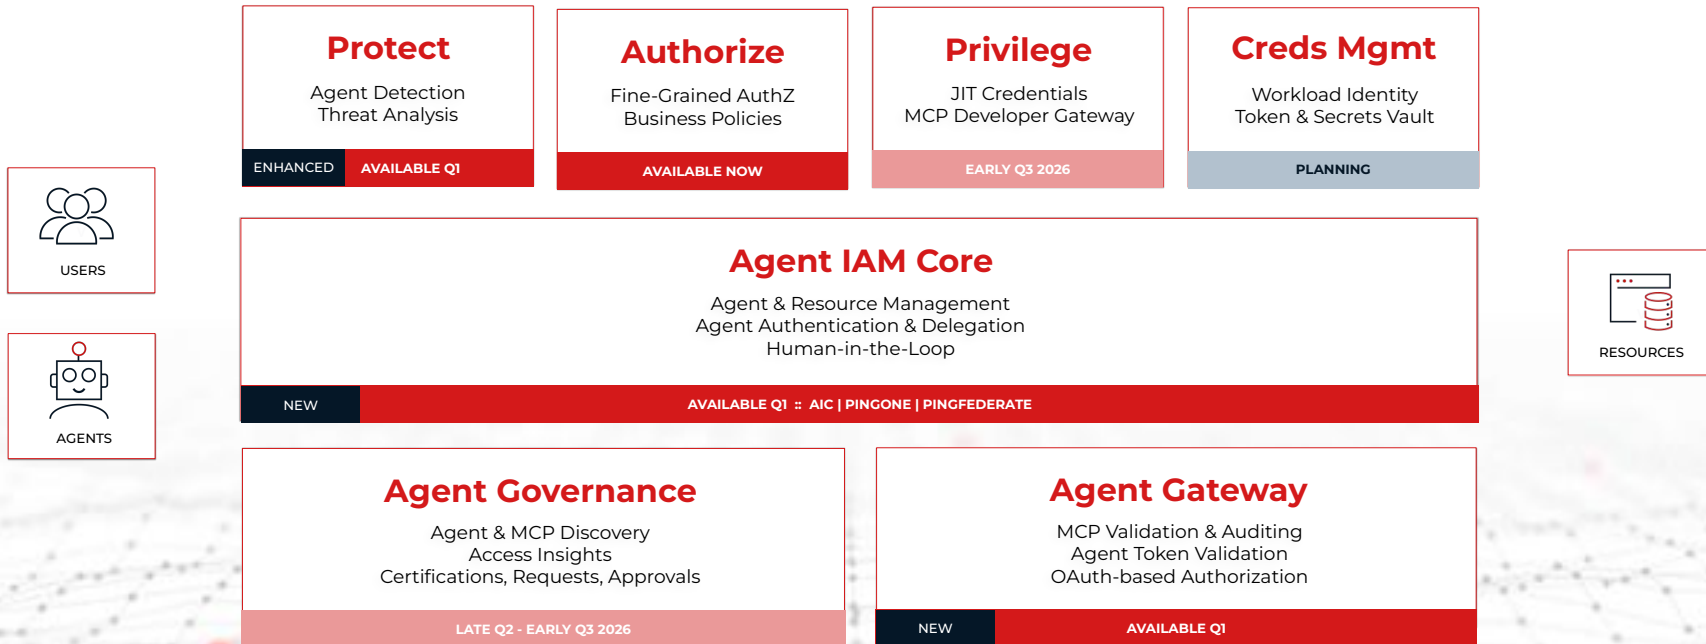

Governance & Audit

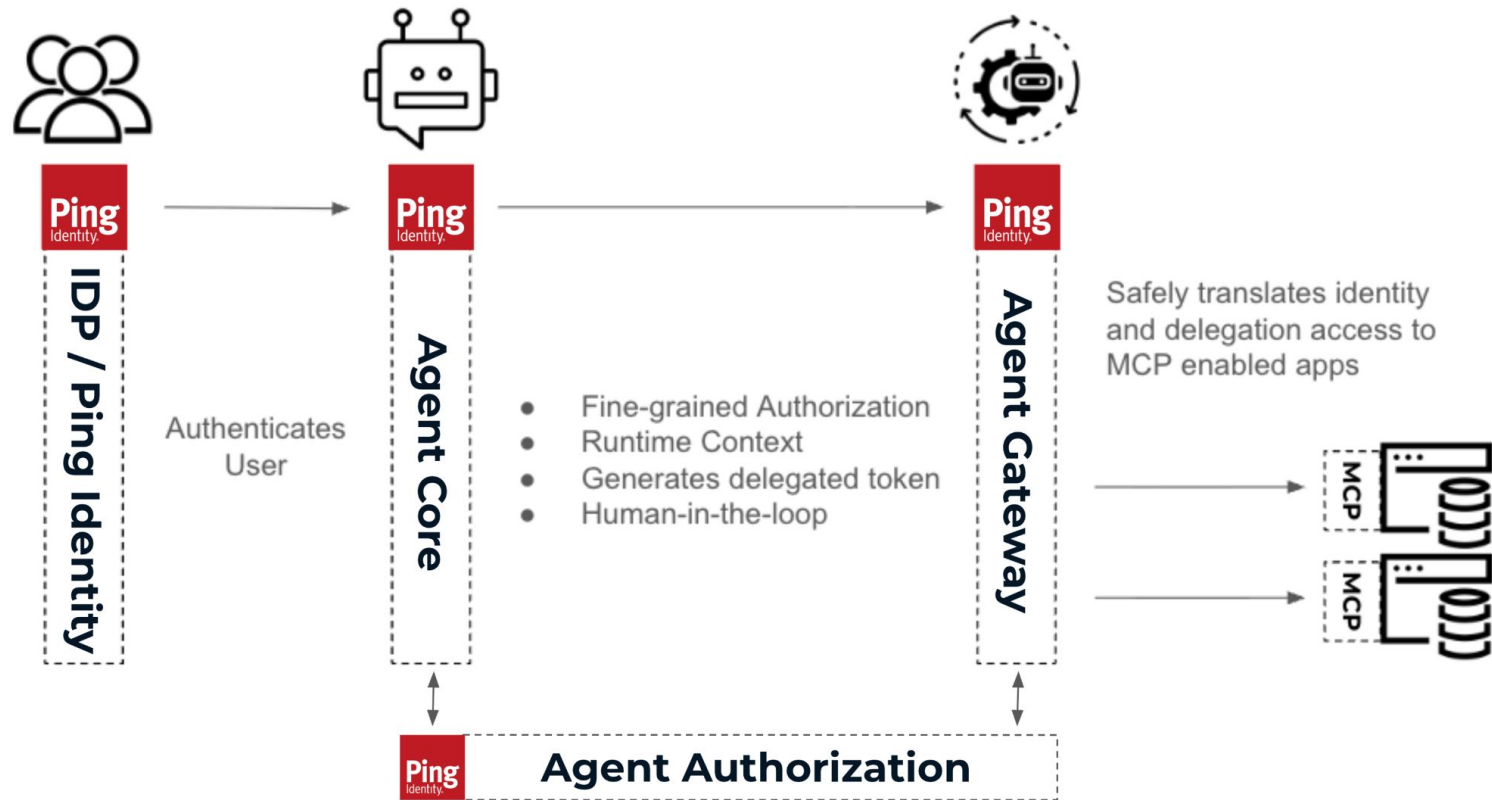

Discover agents and provide access insights.

Request, approve, review, & certify agent access.

Identity for AI General Availability: March 2026

Identity for AI: High Level Architecture

Demos

AGENT IAM CORE
Available Q1

Trust Every Digital Moment™

www.pingidentity.com | [@pingidentity](https://twitter.com/pingidentity)

Agent IAM Core

Runtime identity for AI Agents

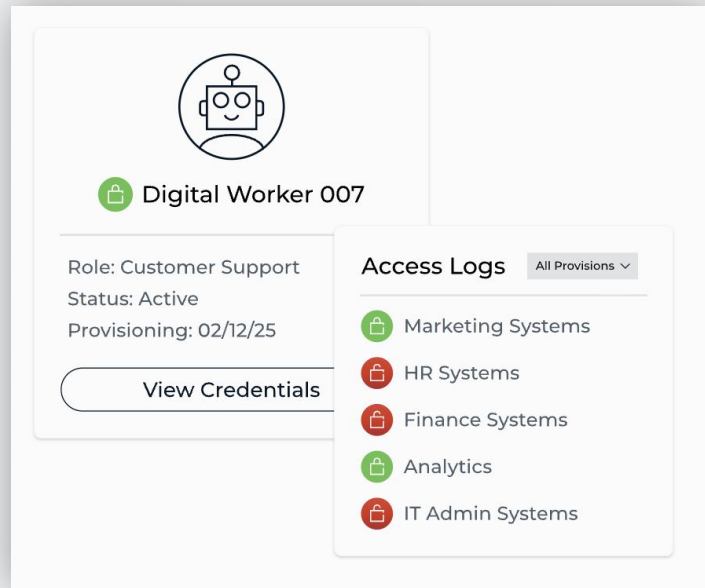

GA in Q1

Capability Overview

- Explicit Agent Identity
- Agent Registration & Ownership
- Agent Management
- Token Exchange for Agent Delegation
- Who can access Agent: Human <> Agent Access Control
- What can Agent access: Agent <> Resource Access Control

Value

- A single pane of glass to onboard, manage and authenticate agents
- Simple configuration of best-practise runtime authentication controls to scale Agent use cases across your enterprise

Agent Gateway

A unified gateway for MCP Servers and Resources

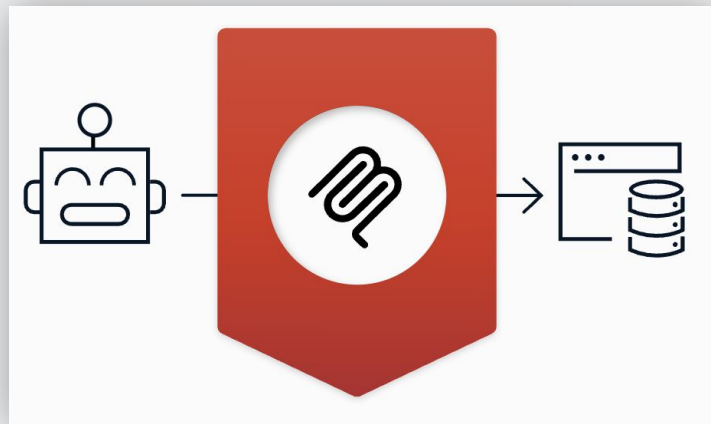

GA in Q1

Capabilities

- Validate MCP requests
- Audit MCP requests and actors
- Throttle request rates
- Enforce coarse-grained OAuth security controls
- Enforce fine-grained access policies
- Token transformation
- Host and serve Protected Resource Metadata

Value

- Consistently manage access to MCP Servers deployed and exposed by your organisation

Agent Detection

Moving Personal Agents from unknown to known

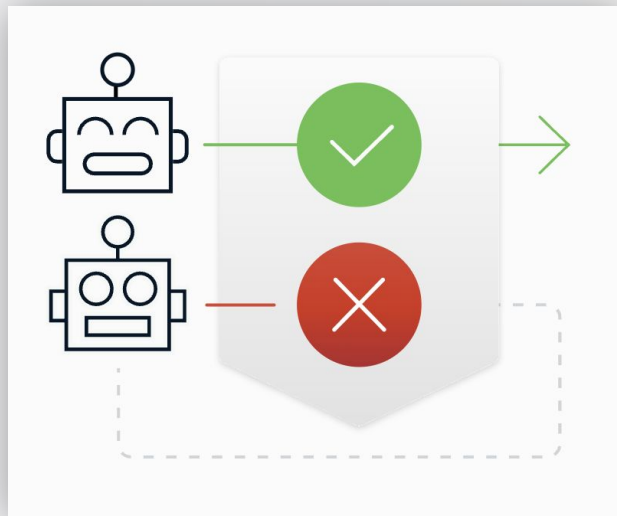

GA in Q1

Capabilities

- Detect Computer-Using Agents interacting with your website or app (e.g. ChatGPT, Atlas)
- Identify agents that declare their identity using Web Bot Authentication protocols
- Identify agents via bot detection / behavioural markers
- Use agent detection signals to direct agents down an alternative authentication or authorization pathway

Value

- Identify personal and external agents interacting with your digital estate so that you can secure customers, protect your assets, and personalize the experience for the agentic channel

Agent Authorization

Agent and MCP Access Management at scale

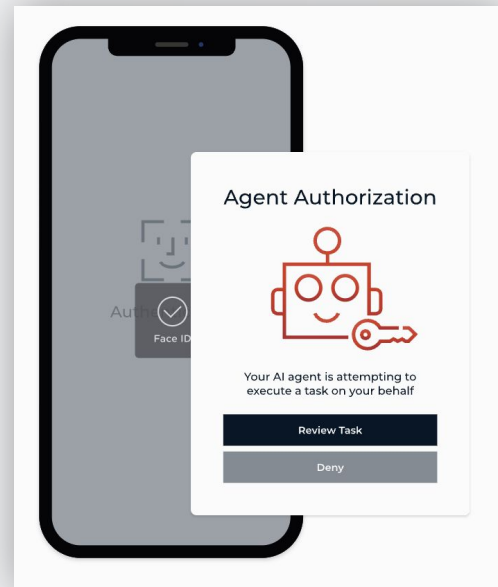

Available Now

Capabilities

- Model MCP Servers and Tools
- Control Agent <> MCP Server Access Management
- Define Scope-Based and Policy-Based Access Control for MCP Servers
- Manage OAuth configuration for MCP Server (inc. registration with CIMD)
- Define Protected Resource Metadata and Web Bot Auth security controls for MCP Servers

Value

- Control all your security controls for MCP Servers from one control plane, alongside your security controls for Human Users, Agents, Applications and APIs

Agent Governance

Bring visibility to Agents across your estate

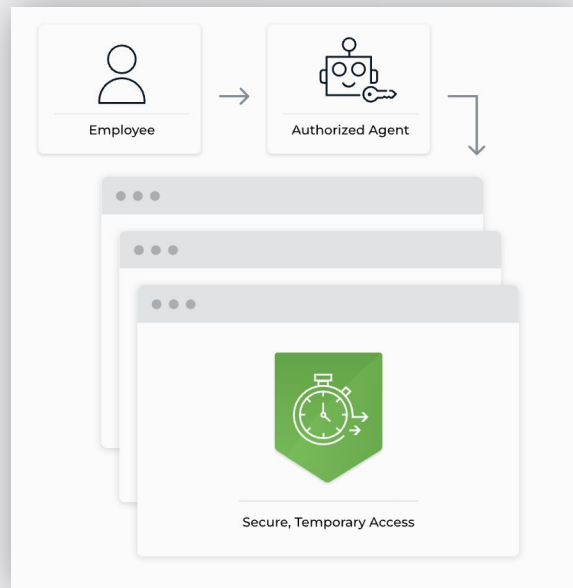

Coming Late Q2 – Early Q3

Capabilities

- Agent discovery and classification
- MCP Server discovery and classification
- Access insights
- Access certification
- Access requests and approvals

Value

- Give visibility to the agents deployed across the enterprise, either locally or across hyperscalers such as AWS, GCP and Azure

Privilege MCP Developer Gateway

Enabling developers to innovate safely and securely

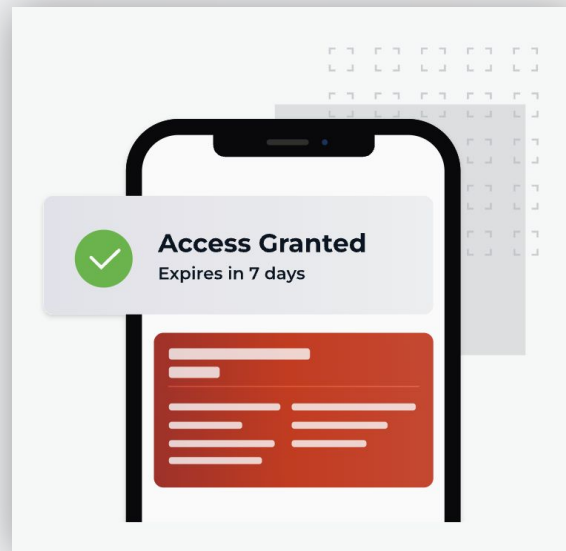

Coming in Q3

Capabilities

- Dynamically manage the MCP Servers that your developers can access
- Inject credentials at runtime so developers don't need to manage them

Value

- Improve security and enable innovation by securely scaling the MCP Servers and Resources that your developers can access from AI Code Tools like Claude and Github Copilot

Trust Every Digital Moment™

Lighthouse Program Overview

Join an elite group of innovative organizations working to secure their agentic enterprises with Ping Identity

Program Mission

- Launch Ping's Identity for AI solution in real-world environments to maximize the value delivered to customers

Strategic Alignment

- Build strategic partnerships with customers actively investing in solving Identity for AI challenges

Elite Participation

- Small number of strategic customers
- Ensure high engagement and high-impact results

A Strategic Partnership Built on Mutual Value

Our Commitment to You

White Glove Onboarding

Dedicated PS package, plus ongoing CX and SE support for a smooth, prioritized deployment.

Direct Influence

Direct access to Ping's Product Leadership with the ability to provide feedback that shapes the future roadmap

Executive Alignment

Regular touchpoints with Ping Executives and early visibility into long-term product strategy

Commercial Advantage

Introductory pricing flexibility and Value Compass realization tracking

What We Ask of You

Rapid Momentum

Commitment to deploy Identity for AI in Q2 2026.

Strategic Feedback

Participation in structured feedback loops to help refine product capabilities.

Executive Alignment

Executive engagement to be the internal champion and foster close collaboration between the customer & Ping.

Advocacy in Market

Agreement to serve as a named reference, including participation in marketing activities (webinar or LinkedIn live) and analyst reference support

Every Agent Must be Identified

Identity is central to Agent Connectivity

AI Agents need access to data and services

To get “smart,” AI Agents use Tools to integrate with APIs and Services

This interactivity means that **IAM is central to AI Agent success**

Solution Capabilities

Authentication & Authorization

- Autonomous Agent Authentication
- On-Behalf-Of Authn
- Delegated Agent Access
- Just-in-Time Human Consent & Approvals
- Out-of-Band Authz
- Third party IdP integration
- SPIFFE integration

Agent / Resource Management

- Agent Registration & Ownership
- Agent Management
- Human and Agent Relationship Mgmt
- Agent Resource Access Management
- Agent Entitlement Management

MCP & Resource Security at Scale

- Validate MCP requests
- Audit MCP requests and actors
- Throttle request rates
- Enforce coarse-grained OAuth security controls
- Enforce fine-grained access policies
- Token transformation

Governance and Audit

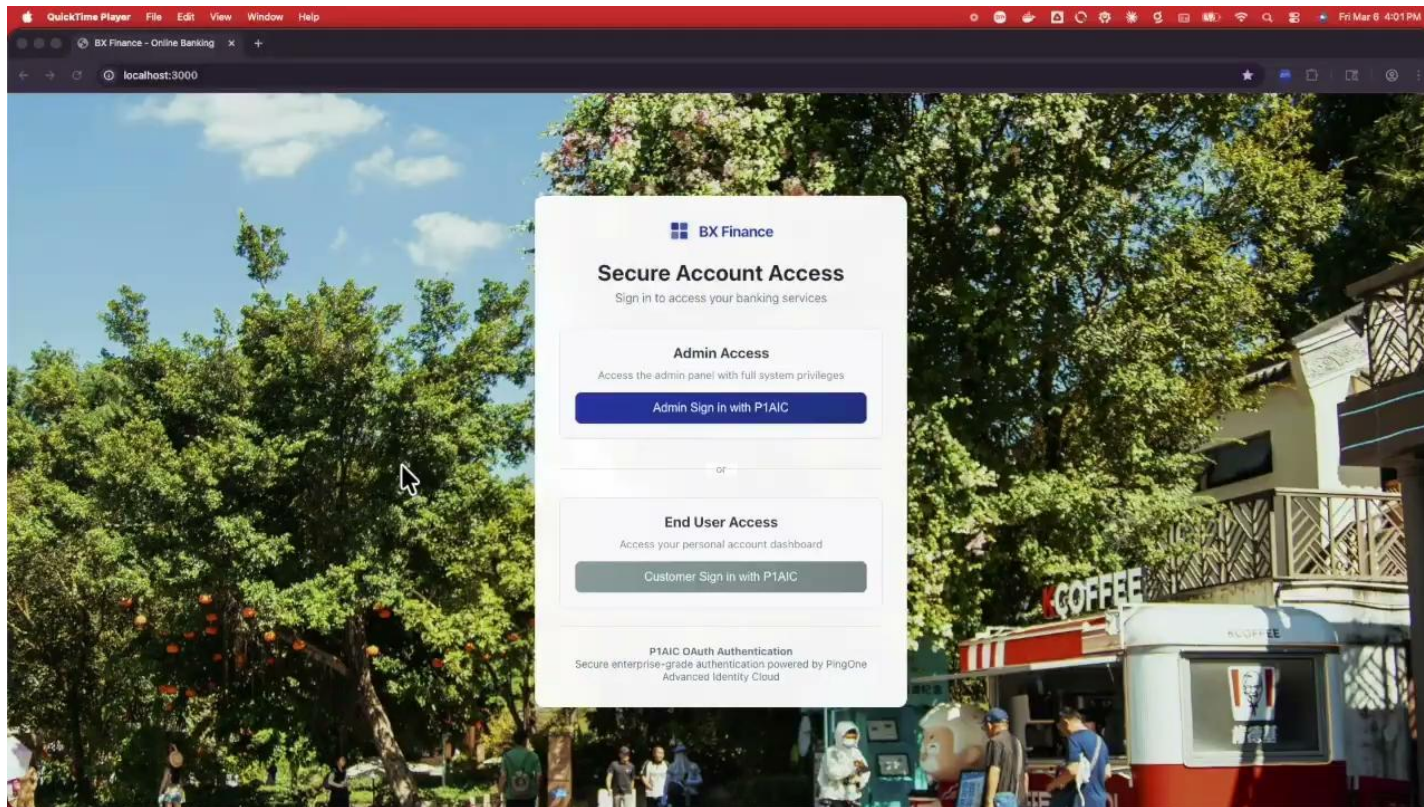

- Agent discovery and classification
- Access insights
- Access certification
- Access requests and approvals

Agent Detection

Agent Detection

Moving Personal Agents from unknown to known

Available Now

Capabilities

- Detect Computer-Using Agents interacting with your website or app (e.g. ChatGPT, Atlas)
- Identify agents that declare their identity using Web Bot Authentication protocols
- Identify agents via bot detection / behavioural markers
- Use agent detection signals to direct agents down an alternative authentication or authorization pathway

Value

- Identify personal and external agents interacting with your digital estate so that you can secure customers, protect your assets, and personalize the experience for the agentic channel

Recent Releases

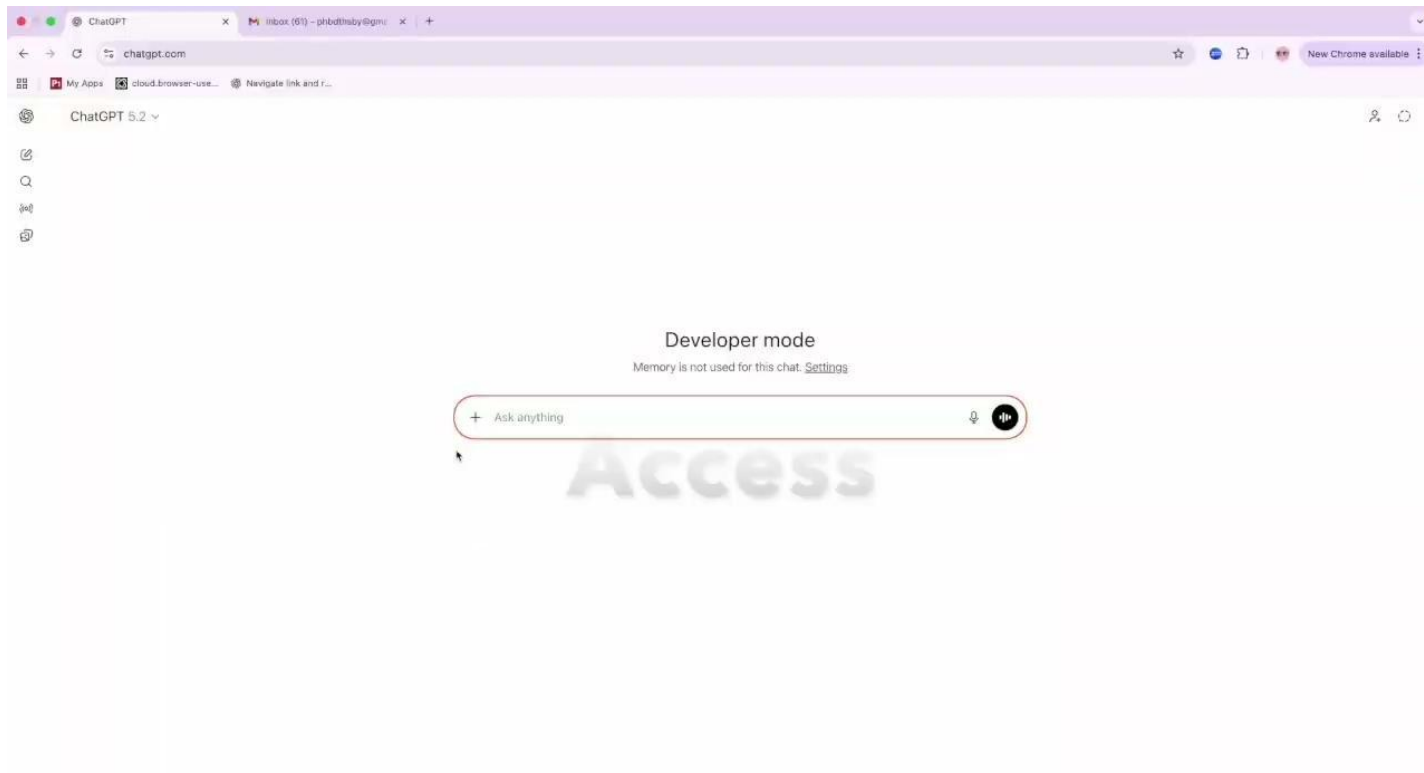

- Baseline detection of Computer Using Agents

Coming Soon

- Expanded detection of Computer Using Agents:
 - Browser Use
 - Comet (Perplexity)
 - Atlas (OpenAI / ChatGPT)
 - Claude Extension
 - Manus Extension
- Templated DaVinci or Journey flows to guide customers on how to authenticate and secure agents acting on-behalf-of human users
- Dashboards to highlight changing behaviours, as users switch from human to agentic-first interactions

Agent Detection

Moving Personal Agents from unknown to known

Authorization

Agent Authorization

Agent, MCP and API Access Management at scale

Coming Q2

Capabilities

- Model APIs, MCP Servers and Tools
- Control Agent <> API Access Management
- Control Agent <> MCP Server Access Management
- Define Scope-Based and Policy-Based Access Control for APIs and MCP Servers
- Manage OAuth configuration for MCP Server (inc. registration with CIMD)

Value

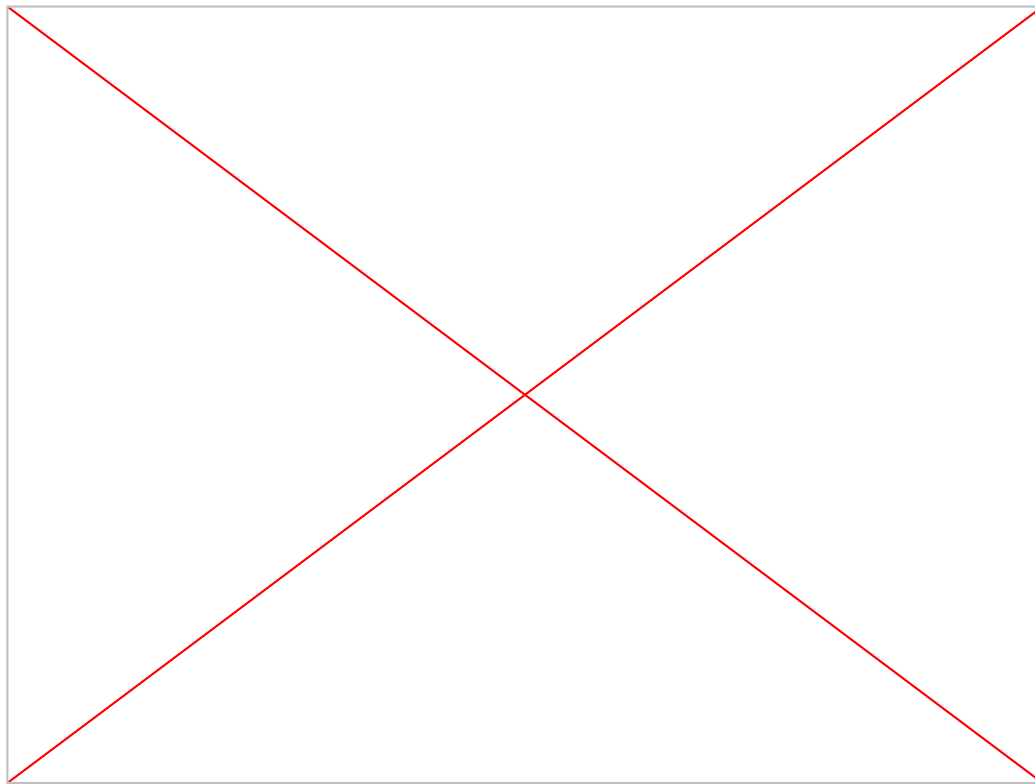

- Control all your security controls for MCP Servers from one control plane, alongside your security controls for Human Users, Agents, Applications and APIs

Coming Soon

- First-class “MCP Server” concept for platform
- Attach OAuth Authorization Server to MCP Server
- Drill down of Tools per server
- MCP Server and Tool Access Controls
- Define Protected Resource Metadata and Web Bot Auth security controls for MCP Servers

Agent Authorization

Agent, MCP and API Access Management at scale

Privileged MCP Developer Gateway

Privilege MCP Developer Gateway

Enabling developers to innovate safely and securely

H2 2026

Capabilities

- Dynamically manage the MCP Servers that your developers can access
- Inject credentials at runtime so developers don't need to manage them

Value

- Improve security and enable innovation by securely scaling the MCP Servers and Resources that your developers can access from AI Code Tools like Claude and Github Copilot

Coming Soon

- Dynamically manage the MCP Servers that your developers can access
- Control access to MCP Servers via simple group based access control policies
- Inject credentials at runtime so developers don't need to manage them
